# MonTech Mooney Viscometer Series

Mooney Viscometers are the backbone for testing the viscous flow of raw materials such as polymers and intermediates such as masterbatches for maintaining stable and consistent manufacturing processes. Furthermore, all MonTech Mooney Viscometers also allow Scorch as well as Stress Relaxation testing.

**MonTech Mooney Viscometer Application Examples**

**Mooney Viscosity**

The Mooney Viscosity test is the most popular test method for characterizing polymers and uncured rubber materials. As defined by international standards, the sample material is preheated for a defined period in a closed die cavity, then sheared by the embedded rotor at a constant rate. The Mooney Viscosity is recorded and data is automatically calculated at predefined time and viscosity points. MonTech Mooney Viscometers offer superior precision and repeatability, providing the user with reliable data and making it easy to differentiate between different types and grades of polymers in order to ensure a high processing consistency.

**Mooney Stress Relaxation**

As Mooney Viscosity testing only provides information about the flow = viscosity of polymers and rubber compounds, stress relaxation testing can be used to assess elastic material behavior. This does not even require additional samples or testing efforts. Once the Mooney Viscosity test is completed, the rotor is stopped within 5 milliseconds and the torque decay is observed and recorded. Once the stress relaxation is completed, the slope-intercept and regression coefficient are calculated, providing excellent correlations in reference to polymer branching and processing.

**Mooney Scorch**

Mooney Scorch is one of the most useful tests to determine starting of cure - so called scorching behavior - of rubber compounds, providing essential data for designing and controlling production processes as well as checking material consistency. Of course, every MonTech Mooney Viscometer offers full Mooney Scorch and Delta Mooney testing capabilities featuring a selection of over 3500 datapoints which include initial Mooney viscosity, minimum viscosity, scorch times and scorch viscosities.

**Mooney Viscosity at Shear Rates and Temperatures**

Besides only static testing, MonTech Variable Mooney Viscometers such as the V-MV 3000 offer full dynamic testing capabilities, allowing measurement of viscosity at variable shear rates (by stepless changes of the rotor speed) and temperatures. Furthermore, even non-isothermal sequences, variable rotor speed profiles as well as step-relaxations can easily be programmed and executed. Overall, this allows a detailed and complete understanding of the polymer behavior. Along with this, low rotor speed rates in Mooney Viscosity testing even provide the ability to test highly elastic and shear sensitive materials that could not be properly tested and characterized on Monney Viscometers before.

Contact us today for a demonstration using your compounds and materials!
**MonTech MV 3000 Basic**

**Entry level Mooney Viscometer**

The MV 3000 Basic is a rotational shear viscometer according to Mooney for performing:
- Viscosity tests (ML / MS 1+X)
- Stress Relaxation testing
- Mooney Scorch
- Delta Mooney testing

on polymers as well as rubber compounds for quality control, research and development applications.

The MV 3000 Basic is supplied as a complete, ready-to-test instrument set including a personal computer, MonControl Software, cables, connectors and regulators as well as a standard set of tools and consumables.

**Easy to use:** All test parameters are pre-programmed through the MonControl Software - the instrument is equipped with a single button for starting the test sequence.

**Direct feedback:** An integrated multi-color LED status bar clearly displays the current machine state.

**Rugged:** The compact and highly rigid frame is made from high strength aluminum. Along with direct-drive technology, this guarantees stable and accurate test results in every environment.

---

**Rotor, die assembly and drive system**

The most fundamental and important parts on a Mooney Viscometer are the rotor, die assembly and in-line drive shaft. The test sample is placed below and above the rotor with optional test film. Then the upper die is lowered onto the lower die with a force of 11.5 kN.

After a pre-heat time, the rotor - which is now totally embedded in the test material in the closed die cavity - rotates at a fixed speed of 2 turns per minute, powered by an in-line drive system.

During the whole test sequence, the temperatures of both dies are measured by a separate precision probe on each die and the heaters are accordingly controlled and regulated to precisely maintain the temperature at its setpoint.

The torque needed to turn the rotor in the test material is precisely measured by an in-line torque transducer. Torque in Mooney Units (MU), die temperatures and rotor speed are recorded. Data is automatically calculated and displayed once the test is completed.

---

**MonControl Software for test configuration, data acquisition, result calculation and reporting**

The Mooney Viscometer MV 3000 is the leading test instrument for measurement of viscosity, scorching and stress relaxation on polymers and rubber compounds.

The MV 3000 is suitable for quality control as well as research and development purposes with excellent repeatability and reproducibility due to its low-mass die design, direct heating and a unique direct drive design with snap-in mechanics.

The massive aluminum frame of the MV 3000 with its 270° accessible die area allows easy sample loading while integrated rotor ejection simplifies rotor handling. Operation is made easy by 4 illuminated pushbuttons providing clear information about the machine state. A motorized safety shield separates the die area before the test sequence is started.

Die temperatures are accurately and precisely measured by calibrated probes and controlled with a precision of +/- 0.03 °C by heaters, dies and rotors with an extremely fast thermal response.

The MV 3000 is fitted with built-in software-controlled systems for automatic balancing and calibration, including a double dead-weight system to apply a defined torque of 100 Mooney units, ensuring the utmost data accuracy and eliminating the needs of any external tools or fixtures.

### International standards

### Die configuration / Rotor
- According to international standards
  - Large (ø 38.1 mm) and small (ø 30.48 mm) Rotor

### Force measurement
- In-line torque transducer

### Closing force
- 11.5 kN

### Rotor speed
- 2.00 turns per minute (0.21 Radians / second)

### Rotor shaft seal
- Standard or longlife seals available

### Stress Relaxation
- According to ISO 289:2005, DIN 53523 Part 4

### Torque range
- 0.01 to 230 MU

### Sample volume
- Two specimens having a combined volume of 25 cm³

### Temperature control system
- Ambient to 232 °C, precision +/- 0.03 °C, digital, microprocessor controlled

### Temperature check system
- Recordings of the temperature gradient on the screen, PID microprocessor monitored

### Calibration
- Fully automatic by built in calibration weights, Software guided

### Measured data
- Mooney - value (MU)
- Temperature (°C, °F)
- Time (min - min / min - sec / sec)

### Data Interface
- Ethernet (10/100 MBit), USB (int.), CF card (int.), RS232 (opt.)

### Data points
- Over 3500 data points available
  - Including:
    - Initial viscosity, ML / ML 1+X, Y+X+Z,
    - Stress Relaxation (log-log), Slope, Intercept, Regression coefficient,
    - Scorch viscosities and cure times

### Pneumatics
- min. 4.5 Bar / 60 psi

### Electrical
- 200 V - 240 V, 6 Amps, 50/60 Hz

### Instrument options
- Instrument control panel with 5" touchscreen display and printer
- Easy access and encapsulated electronic system
- Double channel forced air cooling system
- Low-temperature cooling system MCool 10

The Variable Mooney Viscometer V-MV 3000

brings traditional Mooney Viscosity, Scorch and Stress Relaxation testing to the next level. Besides the ultra-rigid test frame, the instrument incorporates the latest direct servo drive technology and superior design for unbeaten data accuracy and test result precision.

In addition to static Mooney Viscometer testing at fixed rotor speeds under isothermal conditions according to international standards, the Variable speed Mooney Viscometer V-MV 3000 is further capable of running test sequences at variable rotor speeds as well as fully dynamic tests including speed steps, ramps and multi-step relaxation, all this with simultaneous temperature profiles and optional cooling of the sample in the die cavity to as low as +10°C, making the V-MV 3000 not only ideal for polymers and rubber compounds, but also silicone, latex and epoxy resin testing.

This functionality efficiently provides very useful additional information on the test material at the highest accuracy. For example, materials showing similar static viscosities at 2rpm can now be tested at variable shear rates and temperatures.

From these results, polymer specialists can gain a much better understanding of polymer and rubber behavior regarding branching, molecular weight distribution, average molecular weight as well as shear thinning.

The instrument is equipped with MonControl Software and special block programming features to allow an unlimited number of rotor speeds and test temperatures per test - of course in any combination.

- Instrument control panel with 5” touchscreen display and printer
- Easy access and encapsulated electronic system
- Double channel forced air cooling system
- Low-temperature cooling system MCool 10
- M-VS 3000 constant volume sample cutter
MonTech Mooney Viscometer

Cooling, data and productivity options

Expand measurement capabilities and increase instrument flexibility with MonTech’s unique instrument options:

Cooling options

Pneumatic cooling system
Both test dies are cooled separately by a PID-controlled forced air cooling system.

This system can be used to rapidly cool the Viscometer from a higher testing temperature (e.g. testing Mooney Scorch at 160°C) to a lower testing temperature (e.g. Mooney Viscosity testing at 100°C), significantly reducing operator waiting and non-productive times of the instrument.

On the V-MV 3000, this option can further be used for running Non-Isothermal testing sequences as well as actively cooling friction heat.

MCool 10
Integrated cartridge cooling system that allows cooling of the test dies and rotor below room temperature down to +10°C, adding additional test capabilities especially for low viscosity materials such as silicones, latex and epoxy resins.
This technology is worldwide patented by MonTech.

Data / IT options

Integrated Industrial Computer
From harsh mixing plants to cleanrooms, special environments demand special encapsulation and protection of the computer system for controlling and managing the instrument. MonTech therefore offers machine-integrated and machine-mounted computer systems in various protection ratings, guaranteeing the highest reliability under even toughest environmental conditions.

Instrument Control Panel
The 5” Color-Touchscreen allows the machine to be operated from a remote computer or completely standalone for simple quality control testing.

RS-232 Logic Interface
Compatibility to older host or software systems as well as interfacing with proprietary third party software systems are no problem for MonTech testing instruments. Every machine can be equipped with a serial RS-232 bidirectional interface to program the instrument as well as retrieve test data and results by a simple, standardized ASCII protocol.

Result and Label Printer
All test results can be directly printed from the instrument through an optional printer. Of course, reports for single test results, test series reports and even Pass/Fail labels, with or without barcodes, are available for printing.
Productivity options

**Enhanced instrument protection**
Explosive, corrosive or other critical environments are no problem for MonTech rubber testing machinery. All instruments can be tailored to meet any international protection rating depending on what the customer environment requires.

**Instrument table or cart**
For a flexible instrument setup and utilization, MonTech offers movable instrument carts, fixed workbench carts and movable closed-instrument carts. Please contact us to discuss your individual instrument setup and space requirements to identify your ideal workplace scenario.

**Forced air aspiration system**
For a safe workplace free from smells and fumes, even when testing aggressive or hazardous materials, a forced ventilation and aspiration system can be fitted to every MonTech Mooney Viscometer.

Reference Standards and Materials

MonTech offers a full range of precise reference standards and materials for Mooney Viscometers.

**Calibration weights**
High precision calibration weight sets manufactured by MonTech are built into the instrument and controlled using a software guided calibration sequence, guaranteeing the highest accuracy and traceability for Mooney Viscometers.

**Reference polymers for Mooney Viscosity**
Precut reference butyl rubber for Mooney viscosity as well as stress relaxation verification allows easy verification and consistency checks on Mooney viscometers. Each supply includes a test certificate and interlab validation. Compound stability is typically good for up to 10 months.
